

Forward

to automated coolant management
with Castrol® SmartCoolant

Our new technical service solution that offers real-time condition monitoring and automation of coolant management, for central systems and multi tank operations

Our new technical service solution for automated coolant management

Our new intelligent coolant management system optimizes metalworking fluid performance in real time by automatically monitoring and refilling systems to stabilize coolant parameters. You can automate a central system with a Castrol® SmartCoolant AS 20 or expand coverage up to 10 additional machines with SmartCoolant ASC.

Castrol® SmartCoolant combines smart technologies and Castrol® expertise to help our customers achieve:

Automated
maintenance

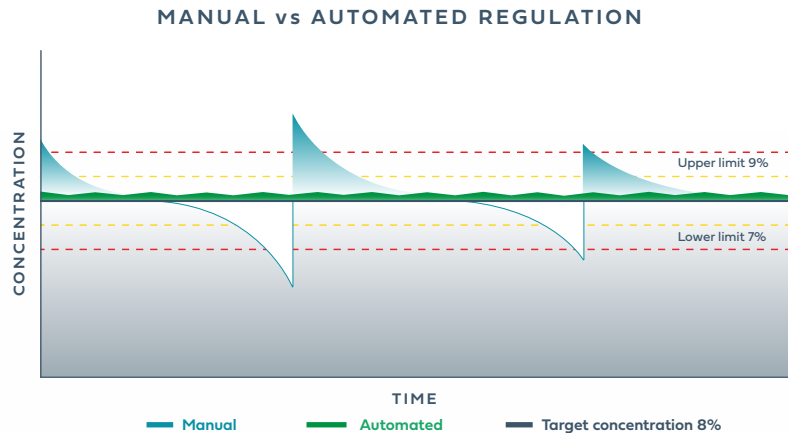

Process
transparency

Reduced
operational costs

How real-time, accurate, and consistent monitoring can deliver savings

Castrol® SmartCoolant enables real-time decisions, adjusting coolant parameters automatically. After using Castrol® SmartCoolant, our customers have estimated measurable savings across their operations.

Access coolant data online

Coolant data can be viewed on the device or via our online portal ensuring all documentation is in one place. It also provides:

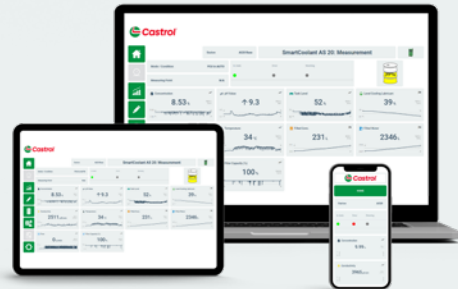

Status
Reports

Alert
Management

Service
Notifications

This is advanced automation.
This is Industry 4.0.

If you're ready to move forward to automated coolant management, talk to Castrol® today.
